Application for Senior Software Engineer

Dear Hiring Manager,

ABOUT ME

I'm a software engineer with several years building **front-end** systems and developer tooling. I care about fast feedback loops and code that reads like the surrounding code.

Most recently I led the redesign of a dashboard framework, shipping features used across dozens of internal services.

WHY EXAMPLE INC.?

Your focus on *developer experience* and open-source tooling maps directly to what I love building. I'd be glad to contribute to that mission.

Sincerely,

Sam Sample
